Goal:
The purpose of this educational clinic block is to gain skills in the diagnosis and management of common urgent care conditions. This unit will prepare residents to distinguish “sick vs not-sick”, hone their diagnostic skills relying on history and physical, and care for patients in a more resource limited setting than the ED or inpatient settings. Although the urgent care environment can be fast-paced, your role is not to see high volumes of patients but to learn different patient presentations you may not see in other settings and to see what is interesting to you.

Common urgent care complaints include:
Upper and lower respiratory complaints (URI, ear pain, sinusitis)
Shortness of breath with and without other respiratory symptoms (asthma, COPD, PE)
Syncope, dizziness
Chest pain
Urinary symptoms (infections, renal stones)
Symptoms and concerns for sexually transmitted infections
Low back pain
Injuries-especially ankle and wrist
Irritated eye(s)
Allergic reactions
Abdominal pain
Bites (animal, tick, human)

Common procedures include:
I&D of abscess
Laceration repair
Splinting

Objectives:

By the end of this educational unit, learners in this rotation will be able to:

1) Patient Care
   a. Obtain an accurate and relevant history for common urgent care complaints (see above) (PC1, MK1)
   b. Perform an appropriate exam for the indicated complaint (PC2)
   c. Select appropriate labs, imaging and procedures based on history and exam, considering availability of various labs (i.e. POC labs) and potential limitations in immediate imaging (PC3, MK3)
   d. Integrate diagnostic results into differential diagnosis of common conditions (PC3, MK3)
   e. Develop initial approach to treatment of common urgent care conditions (PC5, MK2)
   f. Recognize the “sick” patient requiring escalation of care, and other limitations of urgent care (i.e. unable to obtain troponin or refer to physical therapy) (PC5)
   g. Refer when appropriate to specialists for further management or workup (PC5, MK1, MK2, SBP3, ICS 3)
2) Medical Knowledge  
   a. Apply clinical practice guidelines or evidence based national guidelines for management of acute conditions (i.e relying on antibiograms for management of UTI) (MK1, MK2)

3) Interpersonal and Communication Skills  
   a. Identify when additional consultation is indicated, generate an appropriate clinical consultation question (ICS2)  
   b. Communicate with patients and health professionals effectively and professionally (PC5, SBP2, SBP3, ICS 2 ICS3)

4) Professionalism  
   a. Create documentation that is timely (P1, ICS 3)  
   b. Demonstrate professional behavior in caring for patients and engaging with staff regardless of race, ethnicity, gender identify, sexual orientation, socioeconomic status, or medical diagnosis (P2)

5) Systems based practice  
   a. Create documentation that is accurate and complete (SBP2)

6) Practice-based learning and improvement  
   a. Recognize the scope of their abilities and asks for supervisors help when appropriate

**Educational Strategies:**

| Urgent Care clinic visits | Obtaining History  
Perfoming Exam  
Clinical reasoning  
Development of differential and appropriate work up  
Management of urgent care conditions  
Presentation skills |

**Additional Resources:**

- **WIC Resource Main Page:** Includes sites reviewing splinting, emergent vs urgent referrals
- **CDC Antibiotic Use:** Reviews UTI, URI, chronic cough, sinusitis

See Teams site for additional resources
Evaluation:

Background

• In the recent past, there has been no structured way for faculty to provide feedback on their observations or assessments of residents on the clinic block.
• Residents spend a third of their training time in the outpatient clinic setting.
• Collecting faculty observations and assessments in this setting is important for residents to get the feedback and coaching they need to continue to grow and improve their clinical skills.
• The goal for all our residents is excellence in clinical skills.

Ask for faculty

• Offer to do direct observation of skills with a learner in clinic (consider history, physical exam, clinical reasoning skills in the clinic setting, especially those specific to your specialty)
• Ask the resident to send you a direct observation new innovations form that takes 2-3 minutes to complete
• Use the new innovations app on your phone to send an “on demand direct observation” assessment for any resident any time.

Ask for residents (currently this is for all interns, soon this will expand to all residents)

• When on clinic block, ask one faculty member a week to complete a direct observation assessment on a clinical skill that they observed you do in their clinic
• You can send them an email with the direct observation from new innovations, or you can show them how to use the new innovations app on their phone.

Two “How To” videos- for faculty and residents:

This video demonstrates how residents can request an on-demand evaluation be sent to a faculty member. It also describes who to sue this tool to assist in making this a coaching moment. (5 min video)

https://vumc.box.com/s/svvwn5rtnlxhtgvneo858eg6kswjw6i0

This video demonstrates how faculty can download the new innovations app on their phone. It also demonstrates how to complete and send in the on demand evaluation on their phone (3 min video).

Date:__________________________________________________________
Resident Name:__________________________________________________
Faculty Observer name:___________________________________________
What specific skill did you decide to observe? ________________________

1. What is the resident’s learning objective?

2. What did you observe the resident do well?

Skills to consider observing:
- Information gathering - Obtaining accurate and complete hx
- Specific physical exam skill
- Information transfer - patient education
- Motivational interviewing (wt mgmt, tob cessation)
- Counseling
- Breaking bad news
- Goals of care/ Family meeting
- Clinical reasoning

3. What deficiencies and/or errors did the resident commit?
   What should they do differently? How should they do it differently?

3. Based on this single observation, how would you approach your supervision of this learner in this skill the next time?

4. What plans for change did you and the resident make going forward?
